Subject : Conformity to French positive lists  
Your Ref. : Formulation dated 05.01.2016

Dear Szymczak Elzbieta,

You asked me to check the conformity with regards to the French positive lists for drinking water contact for your product named :

**Cobalt Accelerator 4%**

So I have the pleasure to inform you that the chemical composition you sent me on January 5, 2016 *is in compliance with the French positive lists* mentioned in the circular n° 2000/232 dated 27<sup>th</sup> April 2000 and used for the assessment of products intended to come into contact with drinking water.

As a consequence, the product Cobalt Accelerator 4% can be used to produce materials intended to come into contact with drinking water subject to the respect of certain restrictions (Specific Migration Limits) emitted on its constituents. In addition, its concentration in the materials should remain below 5%.

This certificate is established subject to the no-modification of the chemical composition of Cobalt Accelerator 4%. It can in addition be called into question by the evolution of the positive lists. So a new assessment should be done on December 2018.

Sincerely yours.

Christelle AUTUGELLE
